

What is it?

WAISENSE® COMFORT is a unique technology that avoids wasting cold water every time you want to use hot water, improving the efficiency of the installation and increasing user comfort.

The system can be installed in any home or establishment where hot water is used. Its aim is to deliver hot water from the installed heater to the room where it is to be used, without wasting a single drop in the process.

WAISENSE COMFORT is technology and efficiency.

FOR WHOM? Smart Water & Home

WAISENSE offers the latest in water technology for efficient and sustainable homes or businesses. If you want to improve the quality of life of your customers or contribute to your business with a sustainable product, WAISENSE COMFORT is for you.

Discover the advantages of smart hot water!

ADVANTAGES

- 1 Thanks to WAISENSE, every user can save between 6 and 25 litres of water per use, with low electricity consumption.
- 2 Increase life comfort and quality of your customers. WAISENSE alerts the user when the water is hot for consumption.
- 3 WAISENSE allows different ways of installation, both in new and existing buildings, and is compatible with any type of individual heater. For installation, no building work is required, nor is it necessary to add pipes or a new water tank. WAISENSE installation is basically plug & play.
- 4 With WAISENSE your customers can actively contribute to the environment and leave water waste at the past. By saving water, you can reduce your water bill and also take care of the planet.

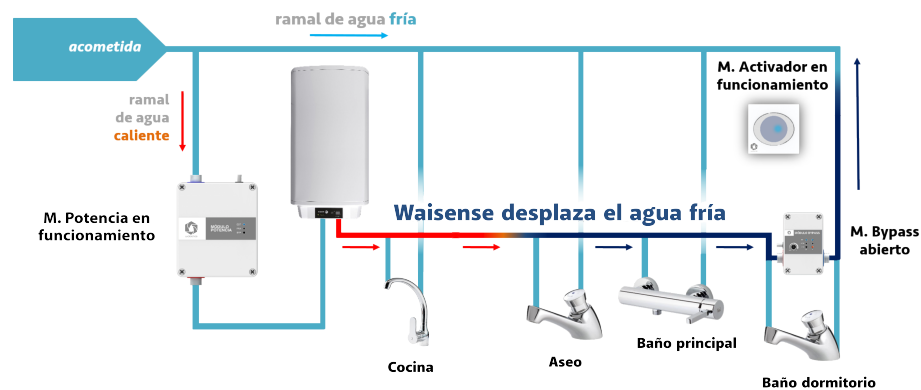

How to use it?

To use the system you only need a WAISENSE KIT, consisting of 3 modules: Power, Bypass and Activator. By simply passing your hand over the WAISENSE Activator, the hot water recirculation starts in the installation. When the water reaches the desired temperature for consumption, the WAISENSE Activator lights up red, indicating that the water is available for use. The next step is to open the tap and hot water will flow directly out - without having wasted a single drop!

How does it work?

To enjoy the benefits of WAISENSE at all points of the installation (kitchen, washbasins, showers, ...), you just need to install a single WAISENSE BASIC KIT. Additional modules are available to extend the range and scope of the benefits.

When hot water is going to be used, the WAISENSE Activator is triggered to start the recirculation of the system. During this process the Power Module drives the cold water in the hot water pipes to the Bypass Module, where it is returned to the circuit, without the need for additional pipes or water tanks. As soon as the water reaches the desired temperature, the Bypass Module stops the recirculation and the Activator signals the end of recirculation.

waisense IS GLOBAL

WAISENSE is an internationally patented technology whose main objective is to save water in different environments.

Our commitment is to solve some of the problems that cause large water losses due to obsolete and inefficient systems.

We are looking for partners around the world to help us in our challenge.

Would you like to contribute?

Expand your business goals while contributing to the planet. WAISENSE is happy to collaborate with you.

Enjoy the benefits of our WAISENSE PRO Partner Program

- Batch discounts
- Technical and commercial advice
- Training
- International promotion

Less water wasted means Menos agua desperdiciada es más agua para todos
